

When Technology meets Communication

Using Augmentative Alternative Communication (AAC) for Children with Disabilities

Join Beit Issie Shapiro's Technology Center experts' webinar to learn about some of the existing technological solutions (low and high tech) for the advancements of communication.

Technology is advancing at a rapid pace and affects us all in our day-to-day lives, making things easier. For people with disabilities, technology changes lives, promoting participation and inclusion in society. Thanks to everyday and mainstream technologies, such as smartphones and tablets, as well as more complex technologies, people with disabilities can now communicate in ways that they have previously not been able to.

The webinar will present how using different accessories and apps allows people with disabilities, from early childhood to adulthood, to communicate effectively in different environments.

When:

Wednesday, April 22nd, 2020

11:00am-12:15pm PDT

2:00pm-3:15pm EDT

8:00pm-9:15pm CET

9:00pm-10:15pm IDT
